

Welcome to MCT-OCD

METACOGNITIVE TRAINING FOR OBSESSIVE-COMPULSIVE DISORDER

Birgit Hottenrott, Dipl.-Psych.
Franziska Miegel, PhD
Marit Hauschildt, PhD
Steffen Moritz, Prof. Dr.
Lena Jelinek, Prof. Dr.
University Hospital Hamburg-Eppendorf
Terence Ching, PhD
Yale University

What does "metacognition" mean?

???

What does "metacognition" mean?

Cognition = derived from the Latin word for “**thinking**”

What does "metacognition" mean?

Cognition = derived from the Latin word for “**thinking**”

Meta = derived from the Greek word for “**about**”

What does "metacognition" mean?

Cognition = derived from the Latin word for “**thinking**”

Meta = derived from the Greek word for “**about**”

Metacognition = thinking about thinking

Metacognitive Training

Human thinking is prone to thinking traps, which are found in many mental disorders:

Metacognitive Training

Human thinking is prone to thinking traps, which are found in many mental disorders:

- They are referred to as "**cognitive biases**" for the rest of the presentation

Metacognitive Training

Human thinking is prone to thinking traps, which are found in many mental disorders:

- They are referred to as "**cognitive biases**" for the rest of the presentation
- Cognitive biases contribute to the development and maintenance of mental disorders

Metacognitive Training

Human thinking is prone to thinking traps, which are found in many mental disorders:

- They are referred to as "**cognitive biases**" for the rest of the presentation
- Cognitive biases contribute to the development and maintenance of mental disorders
- To a certain extent, these thinking styles can be helpful (e.g., setting a high standard for yourself to avoid making mistakes). However, when taken too far (i.e., perfectionism), they cause problems for yourself

Metacognitive Training

Human thinking is prone to thinking traps, which are found in many mental disorders:

- They are referred to as "**cognitive biases**" for the rest of the presentation
- Cognitive biases contribute to the development and maintenance of mental disorders
- To a certain extent, these thinking styles can be helpful (e.g., setting a high standard for yourself to avoid making mistakes). However, when taken too far (i.e., perfectionism), they cause problems for yourself
- The MCT-OCD addresses the cognitive biases that are relevant to obsessive-compulsive disorder (OCD)

Homework

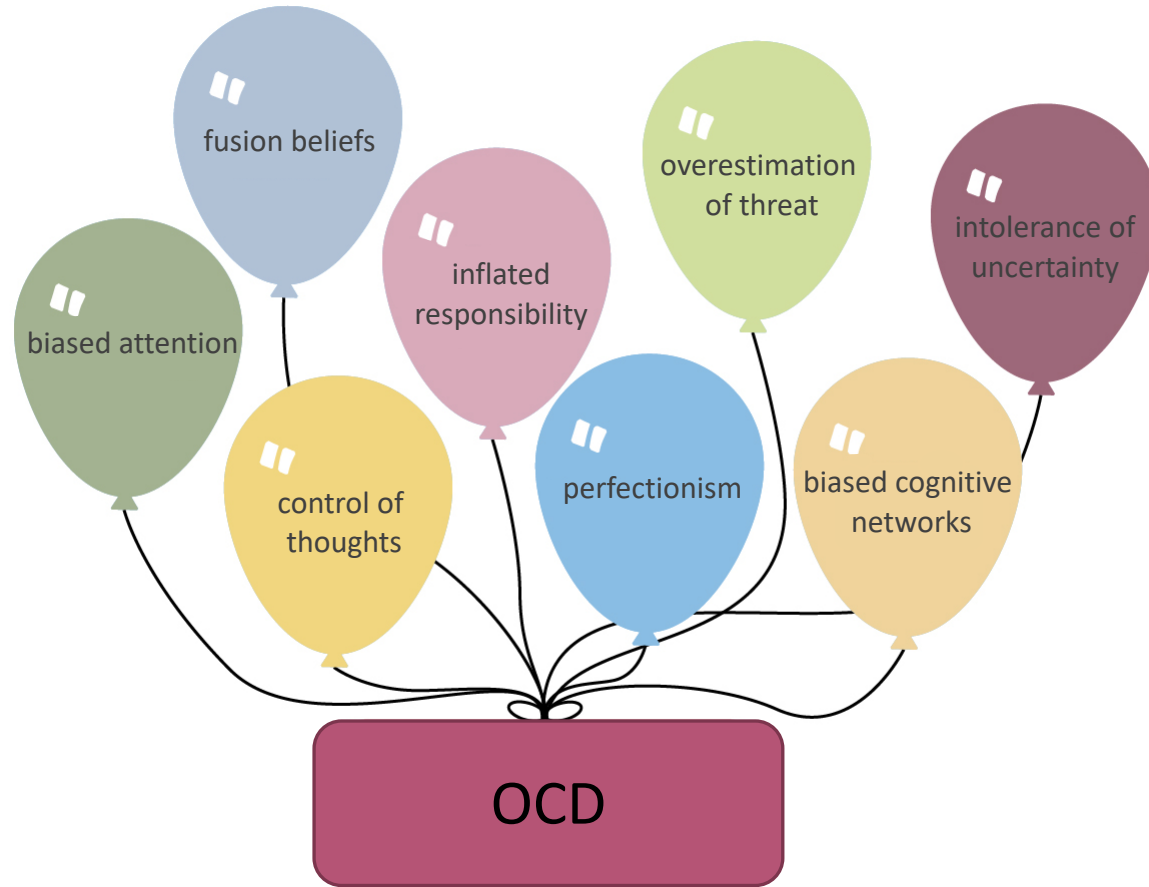

What homework
did you do?

Where did
problems occur?

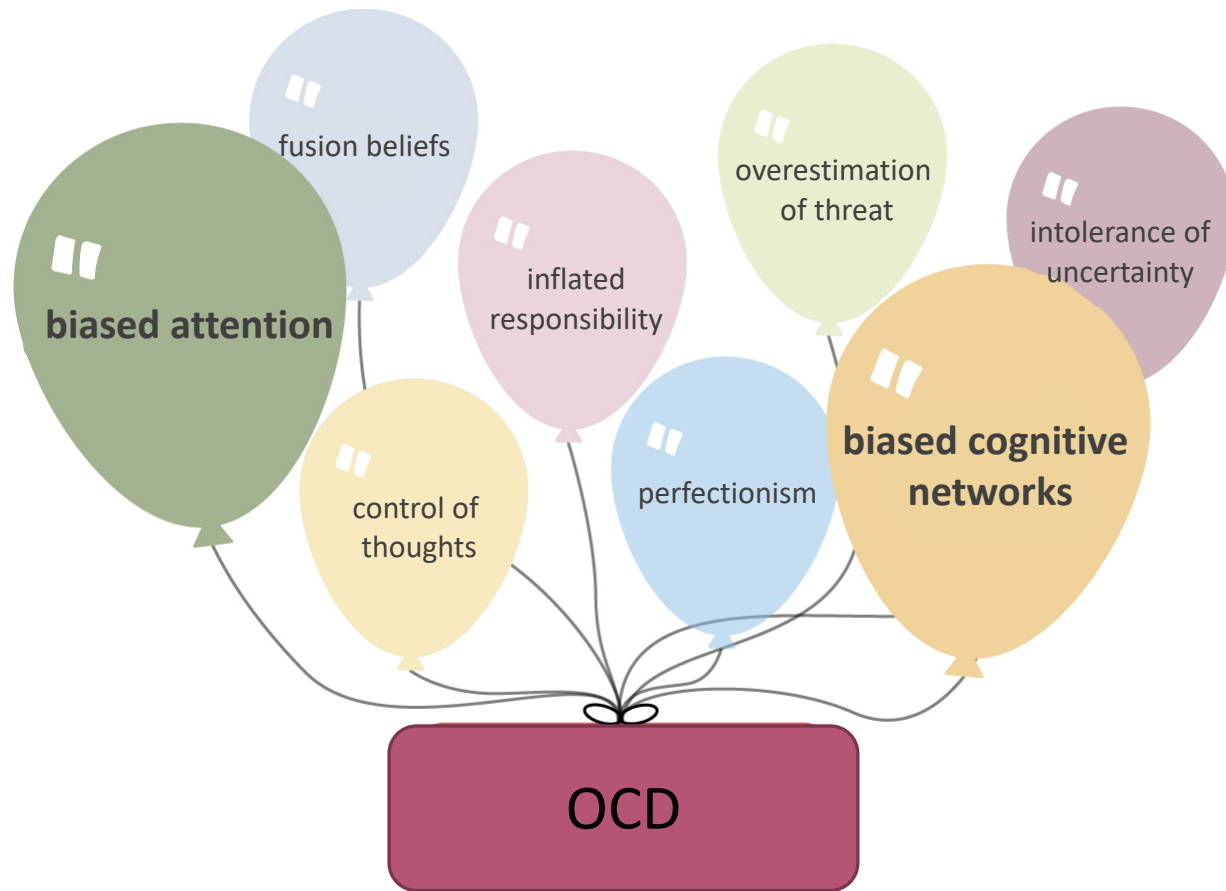

What worked
very well?

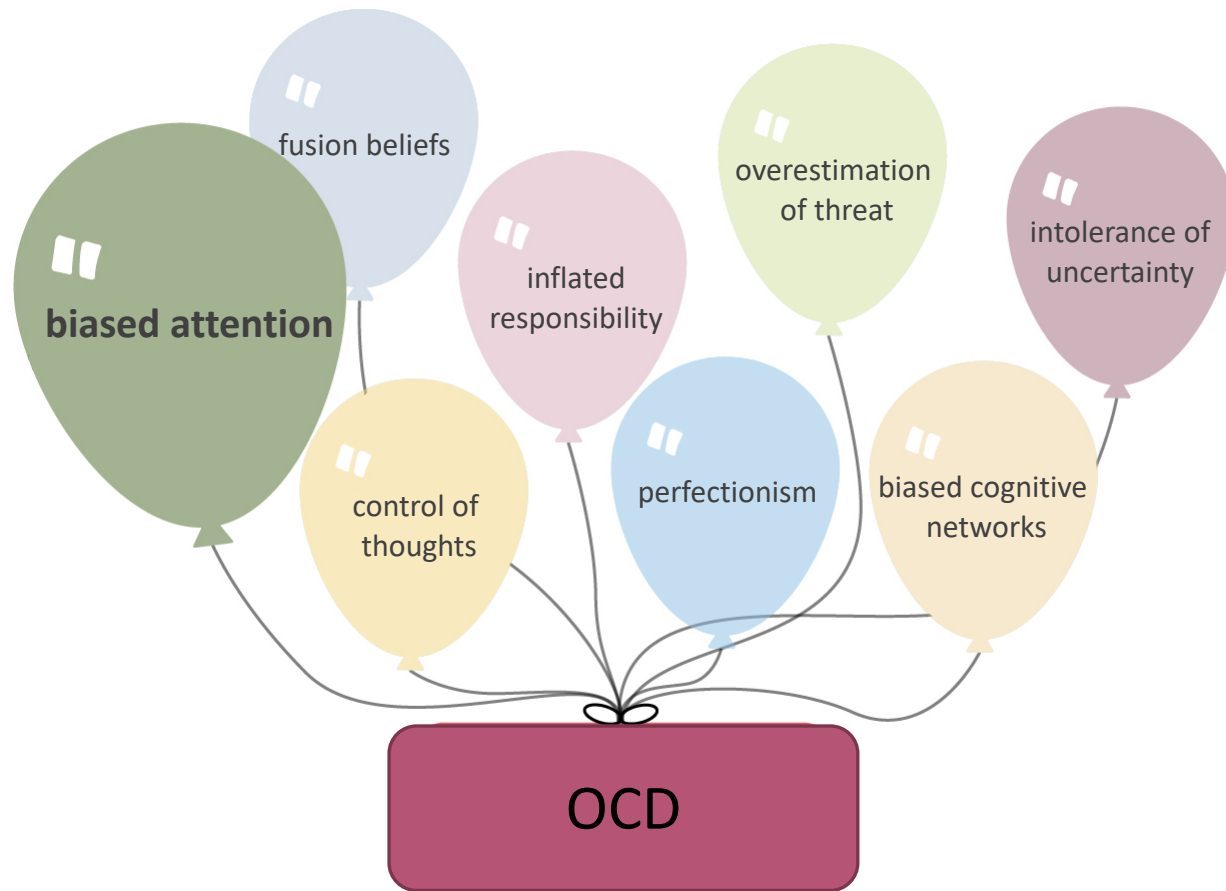

Cognitive biases in OCD

Module 8: Biased attention and biased cognitive networks

Module 8: Biased attention and biased cognitive networks

Biased attention

What is that? A short exercise at the beginning:

Biased attention

What is that? A short exercise at the beginning:

- Take a close look at the image below and notice the first things that catch your eye

Exercise

Exercise

What might catch the eye of people with different fears and OCD symptoms?

Exercise

Depending on the content of the OCD, this could be, for example, the knife block, the electrical devices, the faucet, the stove knobs or the cleaning products

Biased attention

This refers to our tendency to pay more attention to things that are of personal importance

Biased attention

This refers to our tendency to pay more attention to things that are of personal importance

"OCD glasses"

Biased attention

This refers to our tendency to pay more attention to things that are of personal importance

"OCD glasses"

- People with OCD are more likely to, and more quickly, perceive OCD-relevant stimuli/information

Biased attention

This refers to our tendency to pay more attention to things that are of personal importance

"OCD glasses"

- People with OCD are more likely to, and more quickly, perceive OCD-relevant stimuli/information
- Have difficulty detaching their attention from it

Biased attention

This refers to our tendency to pay more attention to things that are of personal importance

"OCD glasses"

- People with OCD are more likely to, and more quickly, perceive OCD-relevant stimuli/information
- Have difficulty detaching their attention from it
- Often the environment is literally "scanned" for stimuli related to their fears

Biased attention

This refers to our tendency to pay more attention to things that are of personal importance

"OCD glasses"

- People with OCD are more likely to, and more quickly, perceive OCD-relevant stimuli/information
- Have difficulty detaching their attention from it
- Often the environment is literally "scanned" for stimuli related to their fears

What are your examples?

OCD glasses- Examples

Sharp objects,
splinters, shards,
knives

OCD glasses- Examples

Sharp objects,
splinters, shards,
knives

Dirt, sticky residue,
sweaty hands, stains

OCD glasses- Examples

Sharp objects,
splinters, shards,
knives

Dirt, sticky residue,
sweaty hands, stains

Noises in the car,
bumpy roads,
objects, lying
next to the road

OCD glasses- Examples

Locks, sockets,
electric switches

Sharp objects,
splinters, shards,
knives

Dirt, sticky residue,
sweaty hands, stains

Noises in the car,
bumpy roads,
objects, lying
next to the road

OCD glasses- Examples

Locks, sockets,
electric switches

Sharp objects,
splinters, shards,
knives

What helps?

Dirt, sticky residue,
sweaty hands, stains

Noises in the car,
bumpy roads,
objects, lying
next to the road

Focus of attention

- Try shifting your attention to another stimulus of the same sensory modality:

Focus of attention

- Try shifting your attention to another stimulus of the same sensory modality:
 - **Visual** stimulus (e.g., when you compulsively scan everything for dirt)

Focus of attention

- Try shifting your attention to another stimulus of the same sensory modality:
 - **Visual** stimulus (e.g., when you compulsively scan everything for dirt)
 - **Acoustic** stimulus (e.g., when you obsessively listen for warning noises like a car rattling)

Focus of attention

- Try shifting your attention to another stimulus of the same sensory modality:
 - **Visual** stimulus (e.g., when you compulsively scan everything for dirt)
 - **Acoustic** stimulus (e.g., when you obsessively listen for warning noises like a car rattling)
 - **Olfactory** stimulus (e.g., when you otherwise direct your perception to odors, smoke, or burned cables)

Focus of attention

- Try shifting your attention to another stimulus of the same sensory modality:
 - **Visual** stimulus (e.g., when you compulsively scan everything for dirt)
 - **Acoustic** stimulus (e.g., when you obsessively listen for warning noises like a car rattling)
 - **Olfactory** stimulus (e.g., when you otherwise direct your perception to odors, smoke, or burned cables)

What could these new, alternative stimuli be?

Alternative stimuli

Visual	Acoustic	Olfactory

Alternative stimuli

Visual	Acoustic	Olfactory
<p data-bbox="81 349 483 392">Look for (examples):</p> <ul data-bbox="81 406 656 878" style="list-style-type: none"><li data-bbox="81 406 540 506">• All blue things in the room<li data-bbox="81 528 637 571">• The number of black cars<li data-bbox="81 592 656 635">• The color of people's eyes<li data-bbox="81 656 618 699">• Happy or annoyed faces<li data-bbox="81 721 502 763">• Blond or black hair<li data-bbox="81 785 483 828">• Clothing material<li data-bbox="81 849 173 878">• ... 		

Alternative stimuli

Visual	Acoustic	Olfactory
<p>Look for (examples):</p> <ul style="list-style-type: none">• All blue things in the room• The number of black cars• The color of people's eyes• Happy or annoyed faces• Blond or black hair• Clothing material• ... 	<p>Listen for (examples):</p> <ul style="list-style-type: none">• The breeze in the car• Child's laughter• Radio• Male, then female voices• Rustle of the wind• Birds chirping• ... 	

Alternative stimuli

Visual	Acoustic	Olfactory
<p>Look for (examples):</p> <ul style="list-style-type: none">• All blue things in the room• The number of black cars• The color of people's eyes• Happy or annoyed faces• Blond or black hair• Clothing material• ... 	<p>Listen for (examples):</p> <ul style="list-style-type: none">• The breeze in the car• Child's laughter• Radio• Male, then female voices• Rustle of the wind• Birds chirping• ... 	<p>Smell (examples):</p> <ul style="list-style-type: none">• Flowers• Perfume• Cigarette smoke• Rain wet clothes• Food smells• ... 

Exercise: Focus of attention

Let's try it out together:

Exercise: Focus of attention

Let's try it out together:

- Choose a sense modality: visual, acoustic or olfactory

Exercise: Focus of attention

Let's try it out together:

- Choose a sense modality: visual, acoustic or olfactory
- For the next 30 seconds, try to focus on this modality and direct attention to a specific stimulus

Exercise: Focus of attention

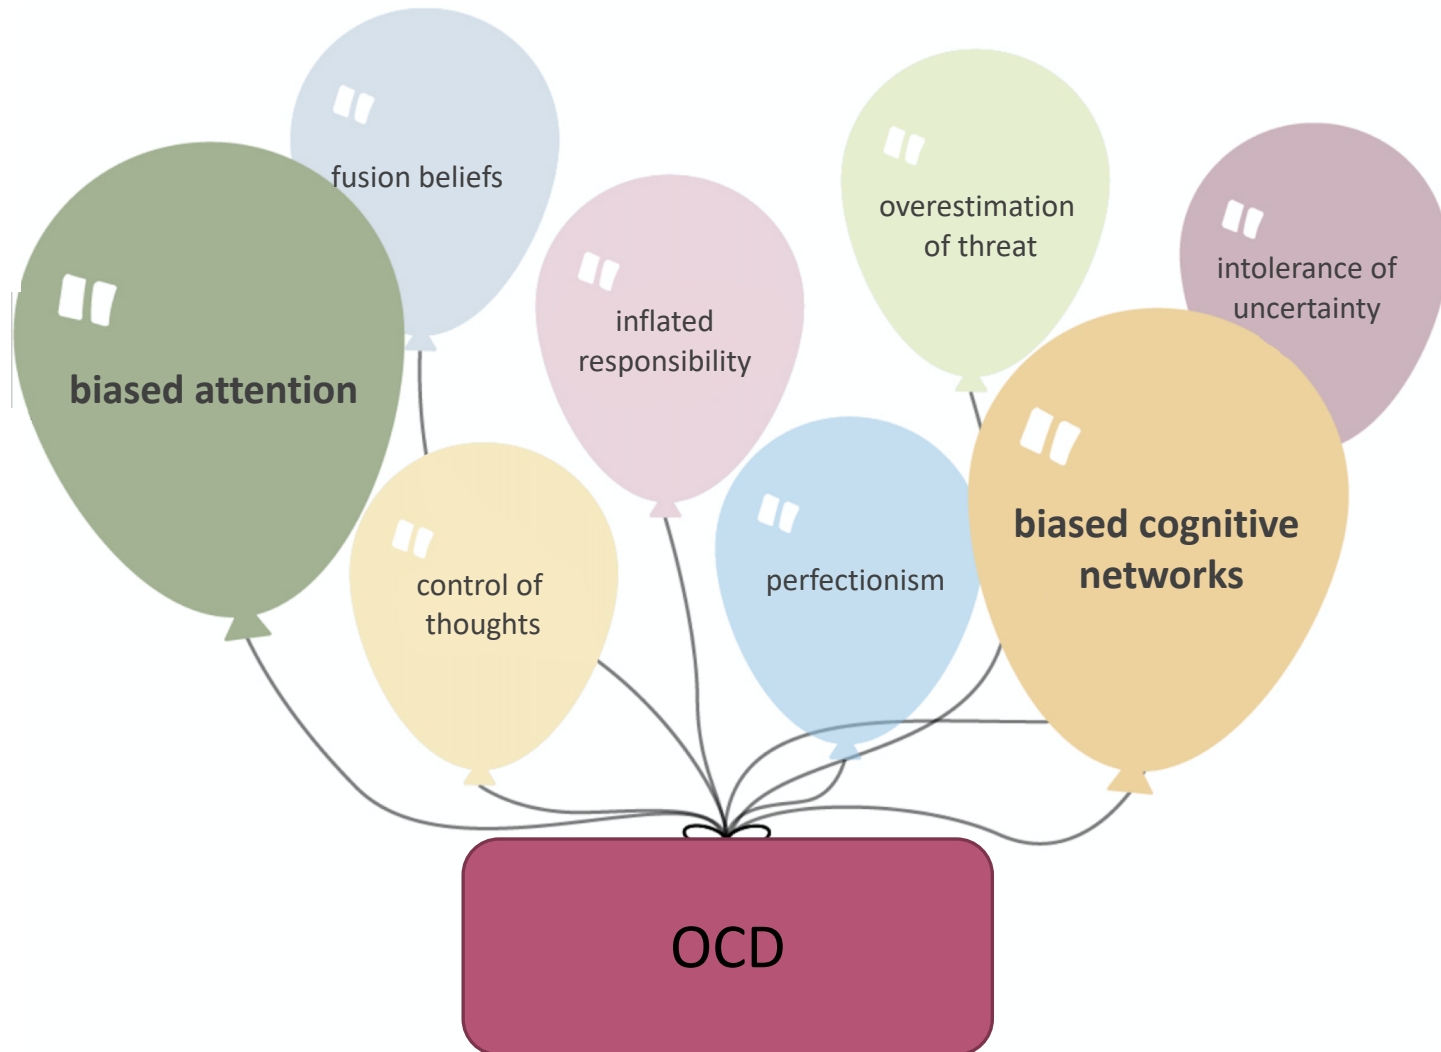

Let's try it out together:

- Choose a sense modality: visual, acoustic or olfactory
- For the next 30 seconds, try to focus on this modality and direct attention to a specific stimulus

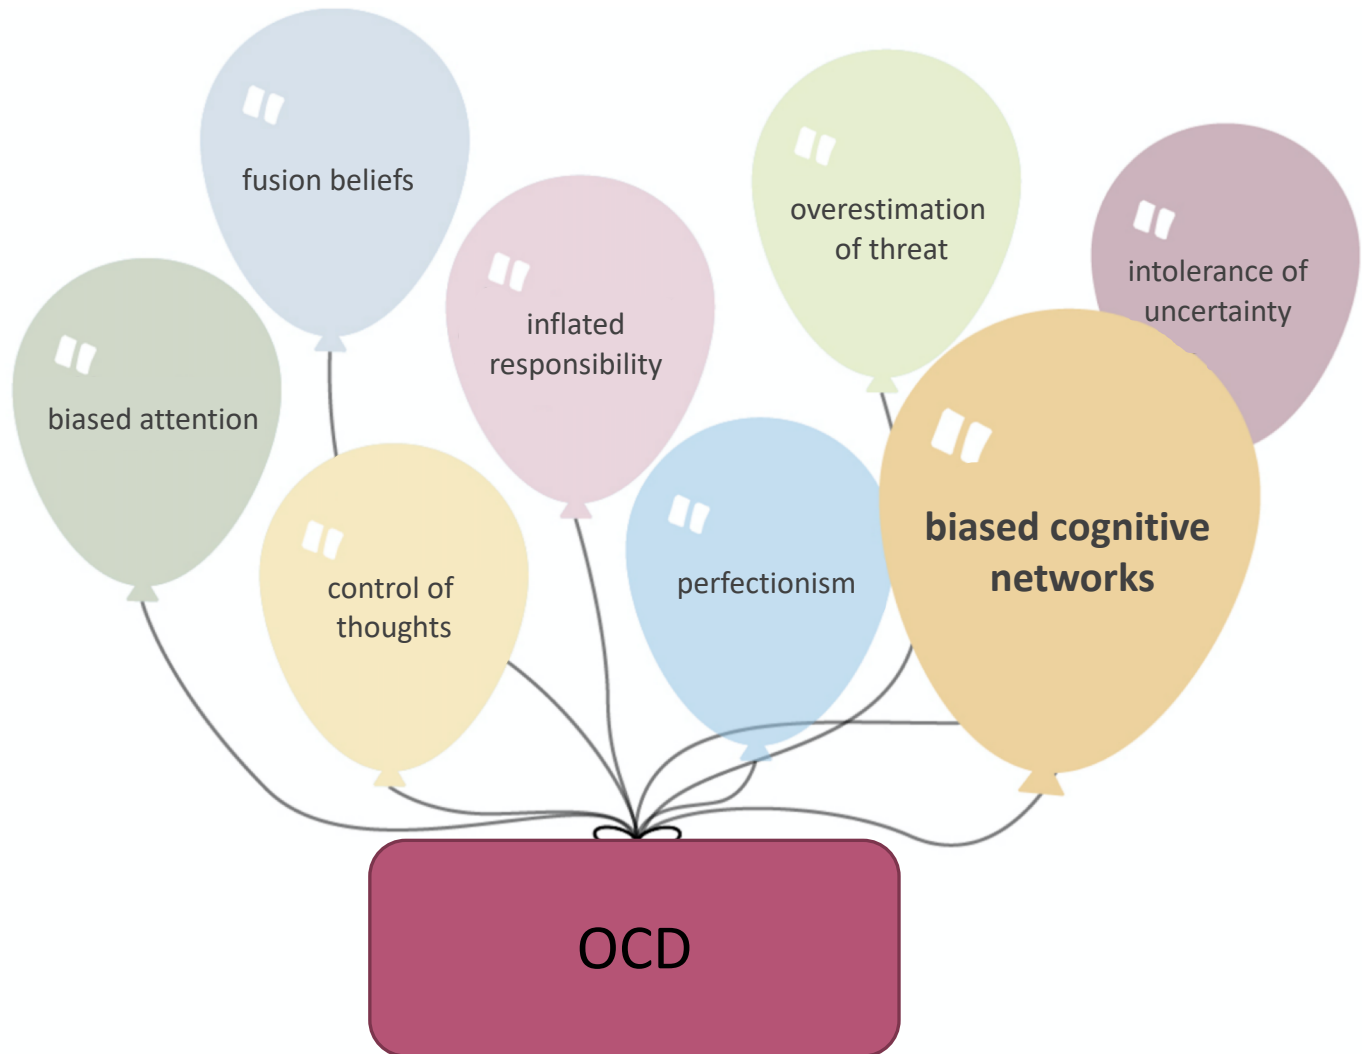

What was your experience like?

Module 8: Biased attention and biased cognitive networks

Module 8: Biased attention and biased cognitive networks

Cognitive networks

What is a cognitive network? Here is a short exercise to illustrate this:

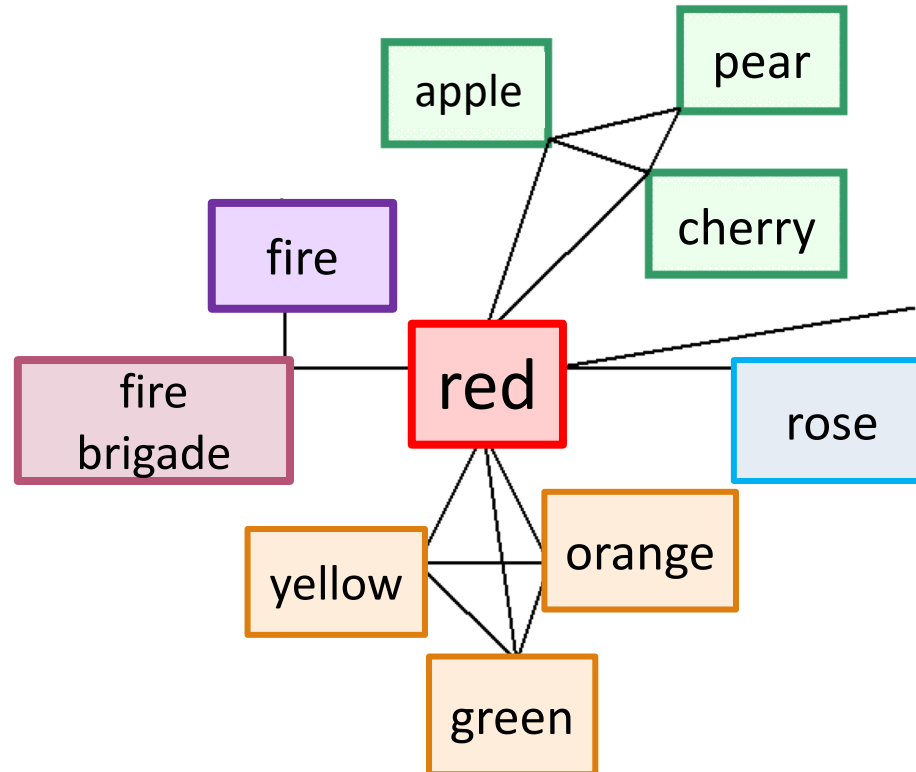

Cognitive networks

What is a cognitive network? Here is a short exercise to illustrate this:

What do you associate with the word "red"?

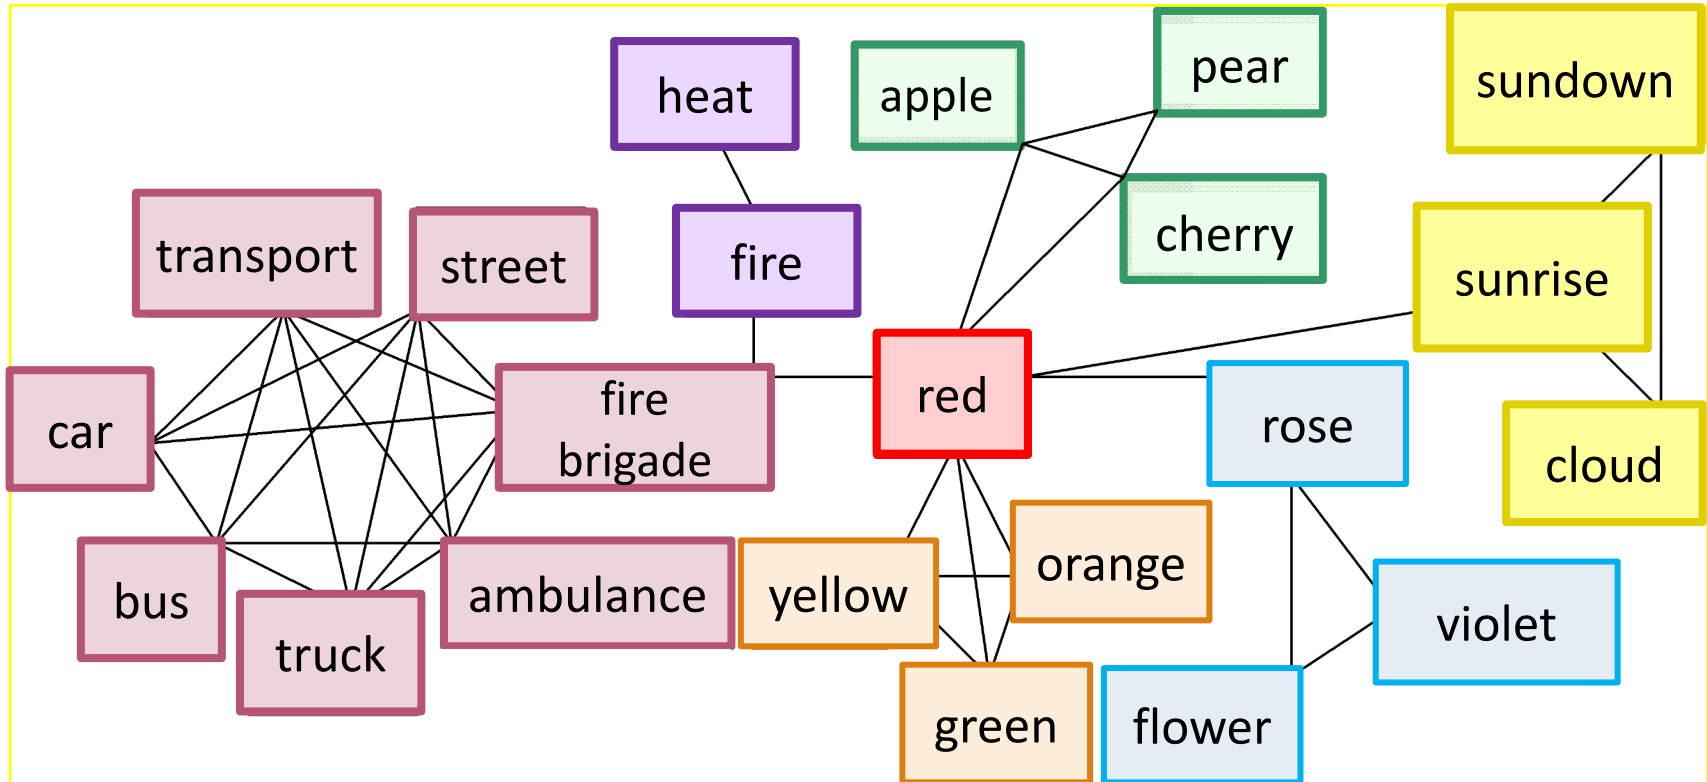

red

Cognitive networks

For each one of these words, you can probably think of more words

Cognitive networks

Associative networks

- All our thoughts (cognitions) are linked together "associatively"

Associative networks

- All our thoughts (cognitions) are linked together "associatively"
- Besides words, cognitions can also be memories, feelings, ideas or even impulses to act

Associative networks

- All our thoughts (cognitions) are linked together "associatively"
- Besides words, cognitions can also be memories, feelings, ideas or even impulses to act

To help you understand this connection, here's a short exercise:

Associative networks

- All our thoughts (cognitions) are linked together "associatively"
- Besides words, cognitions can also be memories, feelings, ideas or even impulses to act

To help you understand this connection, here's a short exercise:

Please answer the following questions very quickly and without thinking too much

Questions

????

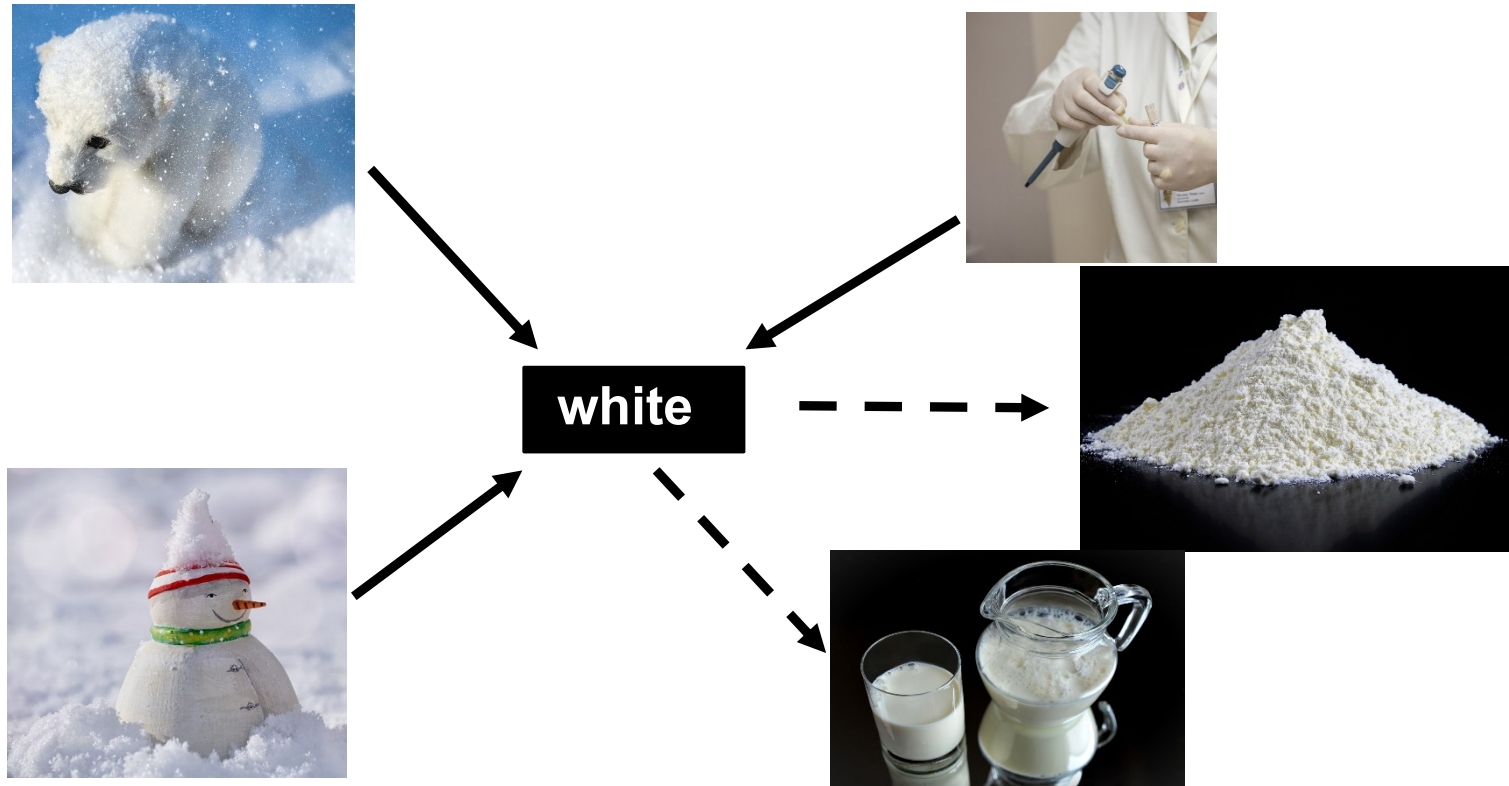

What does the cow drink?

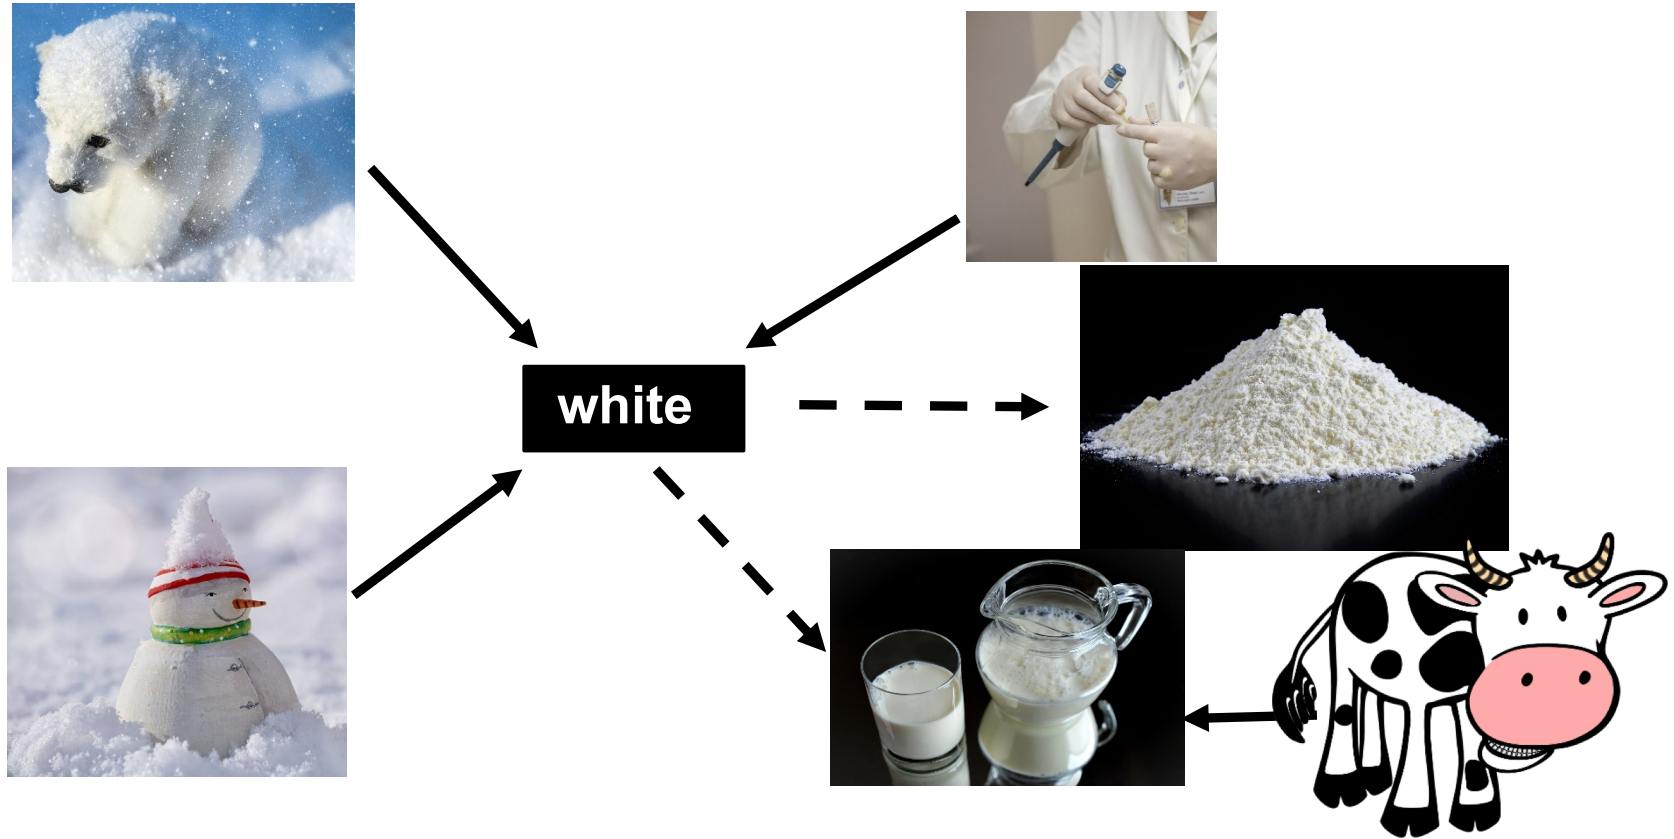

What does the cow drink?

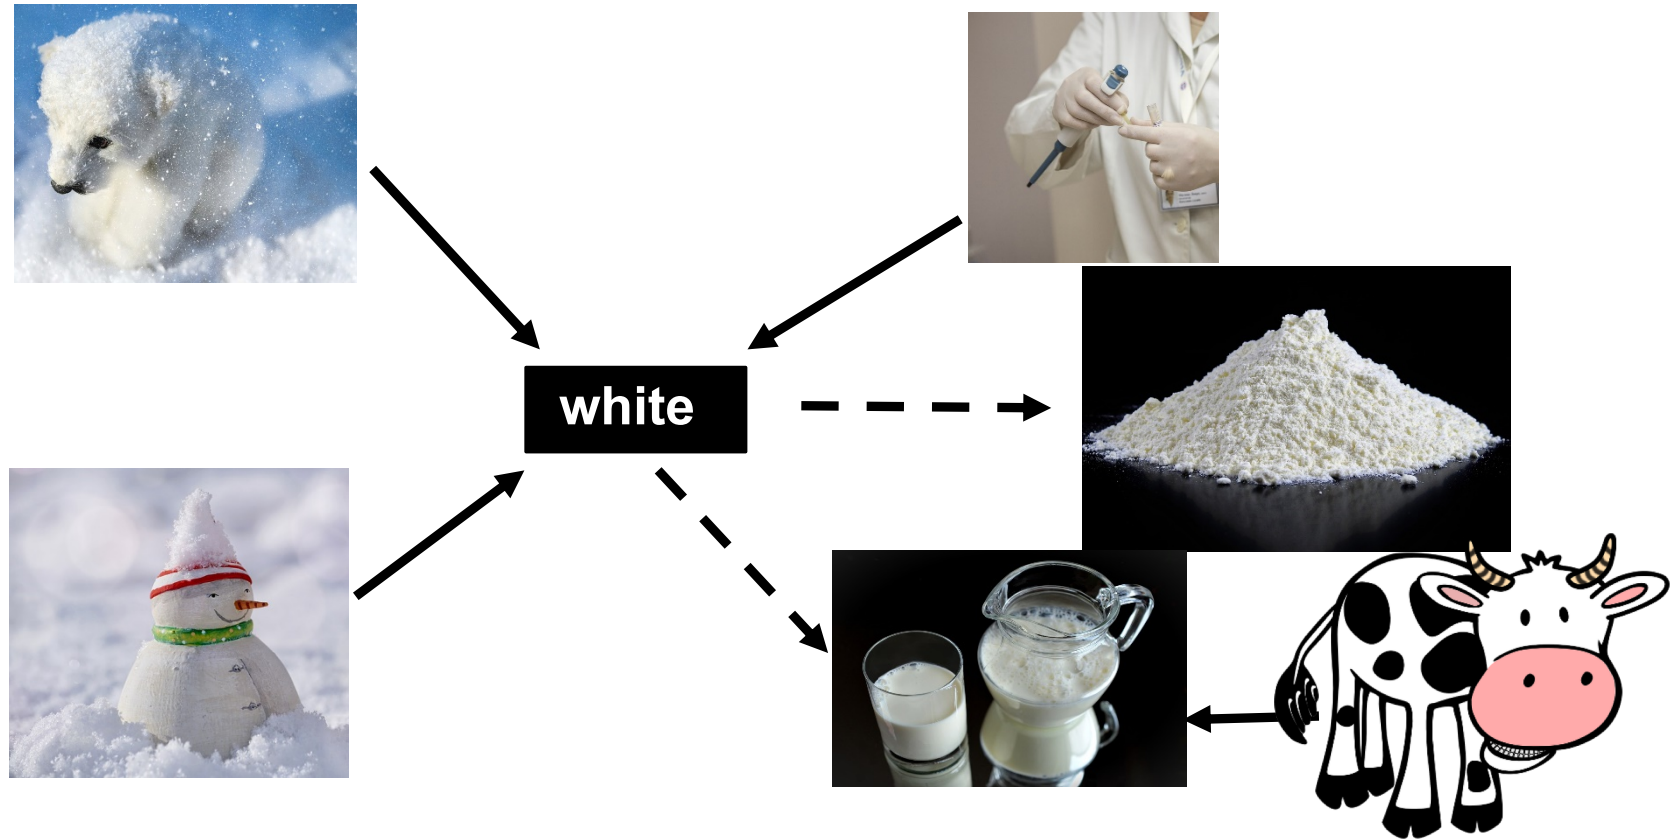

Terms are „activated“ ...

..and retrieved more quickly under time pressure

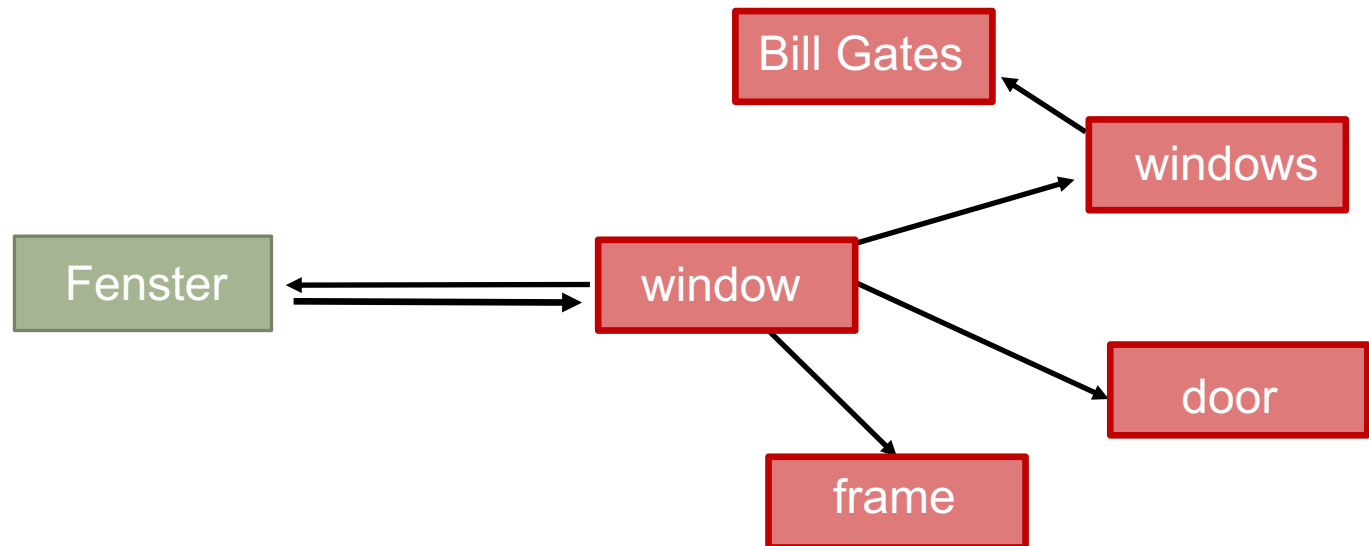

..and retrieved more quickly under time pressure

- If a cognition (in this case “white”) is activated, the "associated" cognitions are also activated and may be recalled more quickly

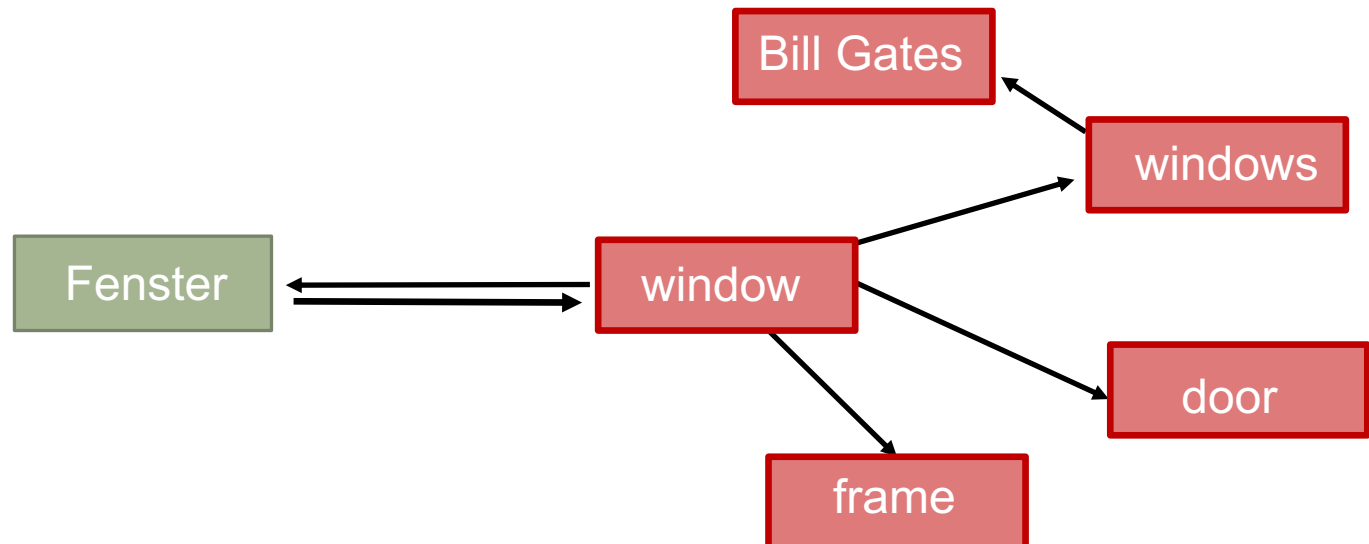

Strength of association 1

- The strength of association between 2 cognitions can be mutually different

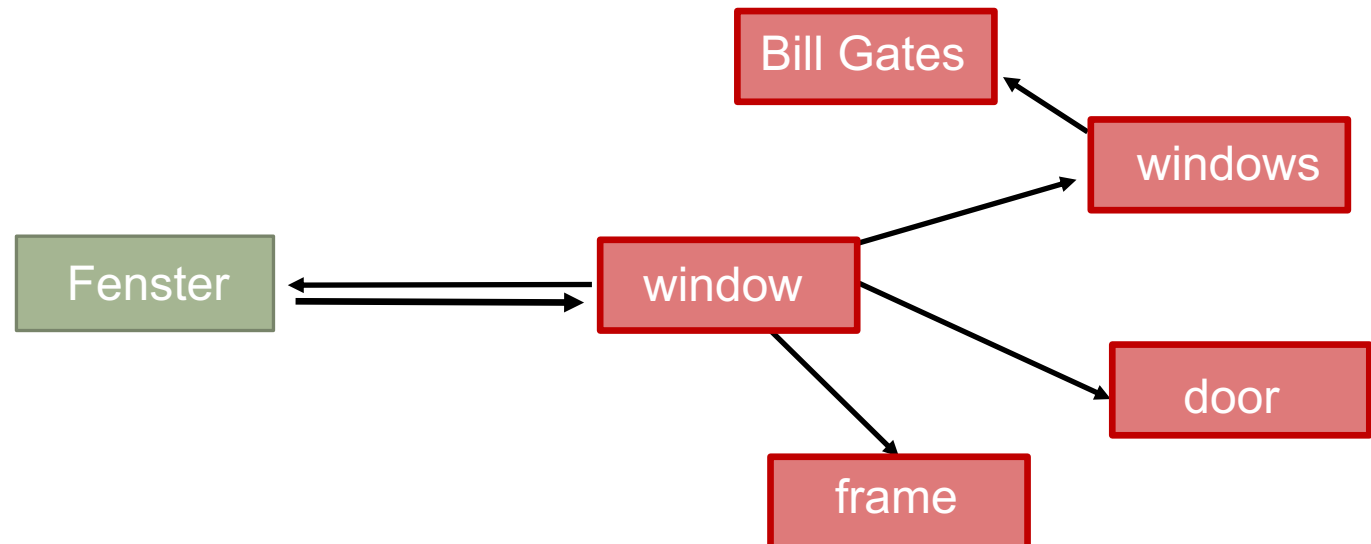

Strength of association 1

- The strength of association between 2 cognitions can be mutually different
- Thus, the strength of the association depends, among other things, on the number of existing associations in total

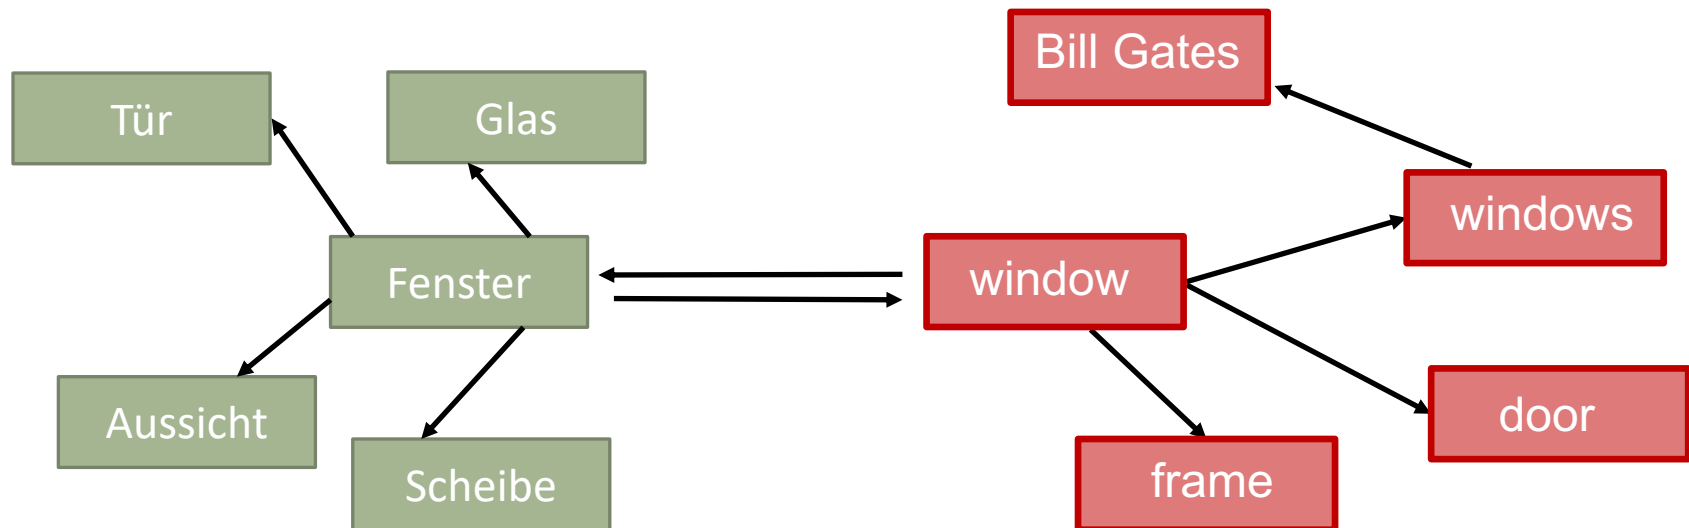

Strength of association 1

- The strength of association between 2 cognitions can be mutually different
 - Thus, the strength of the association depends, among other things, on the number of existing associations in total
- The more different associations there are to and from a cognition, the lower is the individual link strength (*fan effect*)

Strength of association 2

The strength of the association between two cognitions also depends on how often they occur together

Strength of association 2

The strength of the association between two cognitions also depends on how often they occur together

- The more frequently cognitions are thought or imagined together, the stronger the linkage is

Biased cognitive networks

- Cognitions that occur together very often are particularly strongly associated

Biased cognitive networks

- Cognitions that occur together very often are particularly strongly associated
 - When one is activated, the other comes to mind quickly

Biased cognitive networks

- Cognitions that occur together very often are particularly strongly associated
 - When one is activated, the other comes to mind quickly
- Individuals who suffer from OCD often exhibit one-sided associations

Biased cognitive networks

- Cognitions that occur together very often are particularly strongly associated
 - When one is activated, the other comes to mind quickly
- Individuals who suffer from OCD often exhibit one-sided associations

Biased toward obsessive fear

Biased cognitive networks

- Cognitions that occur together very often are particularly strongly associated
 - When one is activated, the other comes to mind quickly
- Individuals who suffer from OCD often exhibit one-sided associations

≠

Decreased access to alternative associations

Other examples

- The **number 13** is now only associated with *misfortune, danger, caution, being unlucky...*

Other examples

- The **number 13** is now only associated with *misfortune, danger, caution, being unlucky...*
 - ... and not with *Alex Rodríguez, teenager* or similar

Other examples

- The **number 13** is now only associated with *misfortune, danger, caution, being unlucky...*
 - ... and not with *Alex Rodríguez, teenager* or similar
- The word **cancer** is only associated with *the fear of disease, death, dying, infirmity and pain...*

Other examples

- The **number 13** is now only associated with *misfortune, danger, caution, being unlucky...*
 - ... and not with *Alex Rodríguez, teenager* or similar
- The word **cancer** is only associated with *the fear of disease, death, dying, infirmity and pain...*
 - and not with *the zodiac sign or the animal on the beach*

Other examples

- The image of a knife is only associated with negative associations such as danger, blood, killing or murder...

Other examples

- The image of a knife is only associated with negative associations such as danger, blood, killing or murder...
 - ... and no longer with neutral associations such as *spoon, fork, peanut butter or bread*

Other examples

- The image of a knife is only associated with negative associations such as danger, blood, killing or murder...
 - ... and no longer with neutral associations such as *spoon, fork, peanut butter or bread*
- And so on...

What's the point of all this?

- Cognitive networks may be biased toward OCD-relevant information in individuals with OCD

What's the point of all this?

- Cognitive networks may be biased toward OCD-relevant information in individuals with OCD
 - No surprise that obsessions are very quickly retrievable and become more and more intrusive

What's the point of all this?

- Cognitive networks may be biased toward OCD-relevant information in individuals with OCD
 - No surprise that obsessions are very quickly retrievable and become more and more intrusive
- However, the networks can be expanded through practice

What's the point of all this?

- Cognitive networks may be biased toward OCD-relevant information in individuals with OCD
 - No surprise that obsessions are very quickly retrievable and become more and more intrusive
- However, the networks can be expanded through practice
 - By finding new associations or reactivating and training old ones

What's the point of all this?

- Cognitive networks may be biased toward OCD-relevant information in individuals with OCD
 - No surprise that obsessions are very quickly retrievable and become more and more intrusive
- However, the networks can be expanded through practice
 - By finding new associations or reactivating and training old ones
- For this purpose, a technique called "**association splitting**" was developed

Association splitting

- Aim:

Association splitting

- Aim:
 - Detaching from the entrenched OCD focused thoughts

Association splitting

- Aim:
 - Detaching from the entrenched OCD focused thoughts
 - Weaken the associations

Association splitting

- Aim:
 - Detaching from the entrenched OCD focused thoughts
 - Weaken the associations
 - So that it is easier to move thoughts away from the subject of OCD and expand in other directions

Association splitting

- Aim:
 - Detaching from the entrenched OCD focused thoughts
 - Weaken the associations
 - So that it is easier to move thoughts away from the subject of OCD and expand in other directions
- For this purpose, **new** OCD-irrelevant associations have to be made, or old/dormant OCD-irrelevant associations have to be reactivated

Association splitting

- Aim:
 - Detaching from the entrenched OCD focused thoughts
 - Weaken the associations
 - So that it is easier to move thoughts away from the subject of OCD and expand in other directions
- For this purpose, **new** OCD-irrelevant associations have to be made, or old/dormant OCD-irrelevant associations have to be reactivated
- In the long term, this should lead to a decrease in OCD symptomatology

Association splitting – how does it work?

- 1. First, select a key term representative of your OCD fears**

Association splitting – how does it work?

- 1. First, select a key term representative of your OCD fears**
- 2. Write down at least 3 alternative associations for this term**

Association splitting – how does it work?

- 1. First, select a key term representative of your OCD fears**
- 2. Write down at least 3 alternative associations for this term**
 - These should be neutral or positive and have nothing to do with the OCD fears and thus, redirect out of the OCD network

Association splitting – how does it work?

- 1. First, select a key term representative of your OCD fears**
- 2. Write down at least 3 alternative associations for this term**
 - These should be neutral or positive and have nothing to do with the OCD fears and thus, redirect out of the OCD network
 - You can create all kinds of associations, even ones that rhyme or are of unique significance to you

snow white

„...Lips as red as blood ...“

blood

flood

steak

blood oranges

blood brothers

bloody Mary

Mud (rhyme)

fire

firework

campfire

fireplace

firetruck

knife

Examples

Own examples?

What can help?

- Rehearse the new associations (e.g., *knife – spoon*; *knife – fork*; *knife – jam*)

What can help?

- Rehearse the new associations (e.g., *knife – spoon; knife – fork; knife – jam*)
- Do this several times in a row (maximum 10 minutes a day)

What can help?

- Rehearse the new associations (e.g., *knife – spoon; knife – fork; knife – jam*)
- Do this several times in a row (maximum 10 minutes a day)
 - What is important is the direction of the association, that is: *knife → spoon; knife → fork; knife → jam* and not the other way around!

What can help?

- Perform the exercises several times throughout the day, but **not while you're actively having obsessions**

What can help?

- Perform the exercises several times throughout the day, but **not while you're actively having obsessions**
 - This prevents the new associations from being used as a distraction or compulsion in response to your obsessions

Learning Objectives

- OCD relevant stimuli are often recognized more quickly and attract attention

Learning Objectives

- OCD relevant stimuli are often recognized more quickly and attract attention
- You can learn to focus attention: Try to direct your attention to other information or stimuli

Learning Objectives

- OCD relevant stimuli are often recognized more quickly and attract attention
- You can learn to focus attention: Try to direct your attention to other information or stimuli
- Our thinking is organized like a network and cognitions are linked to each other

Learning Objectives

- OCD relevant stimuli are often recognized more quickly and attract attention
- You can learn to focus attention: Try to direct your attention to other information or stimuli
- Our thinking is organized like a network and cognitions are linked to each other
 - For people with OCD, networks are often strongly biased toward OCD-relevant information

Learning Objectives

- OCD relevant stimuli are often recognized more quickly and attract attention
- You can learn to focus attention: Try to direct your attention to other information or stimuli
- Our thinking is organized like a network and cognitions are linked to each other
 - For people with OCD, networks are often strongly biased toward OCD-relevant information
- The biased networks can be expanded through practice

Learning Objectives

- "Association splitting" helps to reduce OCD related thoughts by creating new OCD-irrelevant associations or reactivating old/dormant ones

Learning Objectives

- "Association splitting" helps to reduce OCD related thoughts by creating new OCD-irrelevant associations or reactivating old/dormant ones
- By creating new associations or reactivating and training old ones

Closing round

What have I learned today?

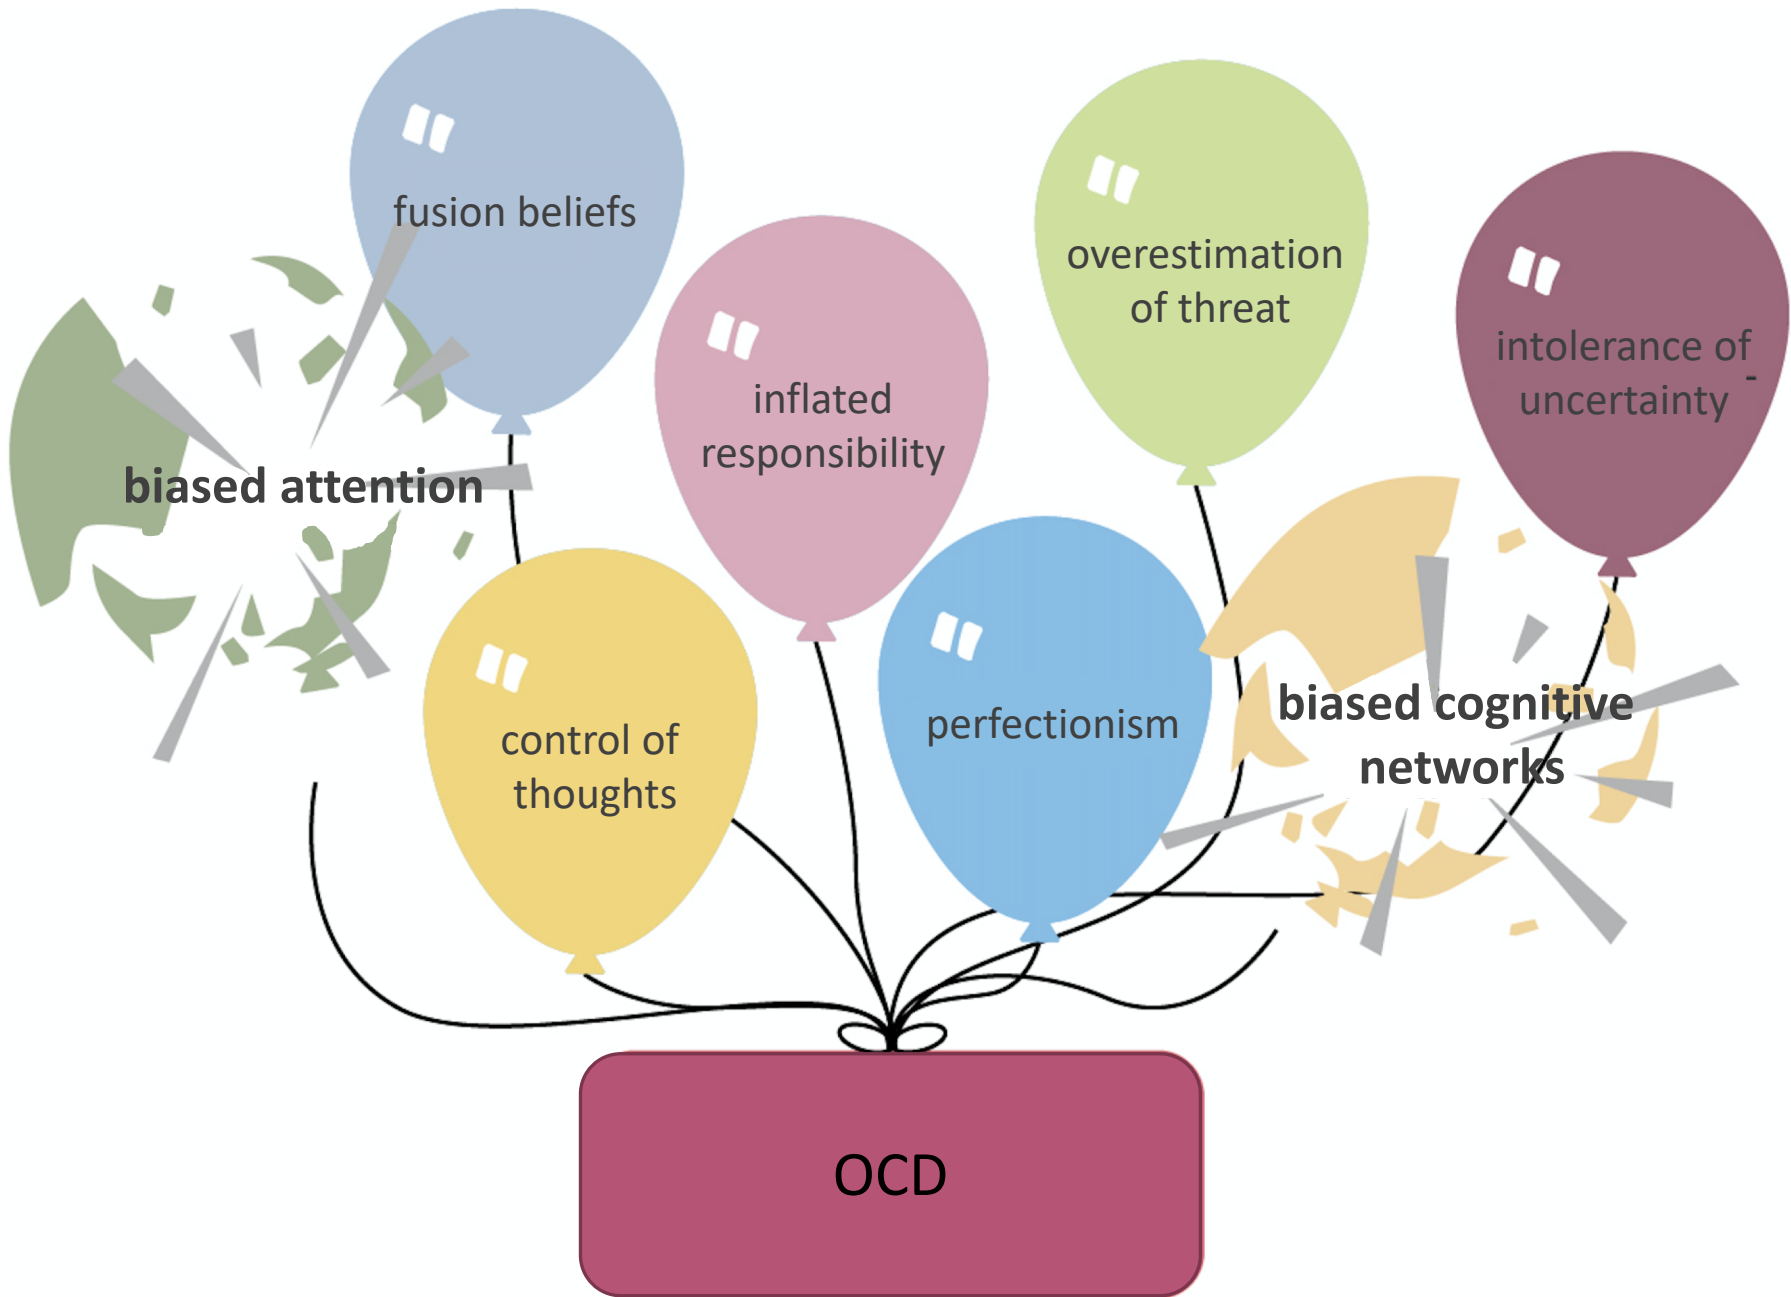

Closing round

What have I learned today?

Which of the presented strategies do I want to practice this week?

Thank you very much, that's it for today.

MODULE 8: BIASED ATTENTION AND BIASED COGNITIVE NETWORKS

Pictures used in this module are reproduced with indirect (creative commons license) or direct permission of the artists listed below, for which we would like to express our gratitude! A full list can be obtained via (.....). If we have involuntarily breached copyright, please accept our apologies. In this case, we kindly as creators for their permission to use their work under the „fair use“ policy.

Die in diesem Modul verwendeten Bilder wurden mit der indirekten (creative commons Lizenz) oder direkten Zustimmung der untenstehenden Künstler reproduziert, wofür wir uns herzlich bedanken möchten! Eine vollständige Liste ist hinterlegt auf (....). Sollten wir unabsichtlich gegen das Urheberrecht verstoßen haben, so bitten wir dies vielmals zu entschuldigen und bitten nachträglich um die Verwendungserlaubnis.
